rak
youngstown

The new standard in commodity tableware.

RAK Youngstown is designed for setting the new standard of excellence in commodity tableware. We have judiciously combined durability, reliability, and functionality while maintaining a sense of elegance that is aesthetically pleasing. Offering a total tabletop solution of dinnerware, flatware, and glassware ... all for a "value-add" to your culinary plan.

Dinnerware

Durable. Functional. Reliable. RAK Youngstown dinnerware sets a higher standard in commodity dinnerware. The 18% alpha alumina adds strength and durability, which means that it is a perfect solution to endure the industry's long-standing demands. The collection is aesthetically pleasing; featuring an optimal thickness to prevent extra weight. The items are double fired, which will help ensure that no metal markings will be left behind. Stack with ease and confidence ... our dinnerware features a diamond polished foot, an exclusive RAK Porcelain technology to enhance longevity.

Product Care & Handling

GLASSWARE

The RAK Youngstown Glassware is dishwasher safe. Here are some guidelines to follow for care and handling.

Helpful Hints when using a dishwasher

- Check the water hardness at the location of use. Then, regulate the water hardness range for the dishwasher.
- Pour out any leftover ice or liquid in the glass.
- Choose a proper glass rack to suit the glass height, bowl, and foot diameter; avoid contact between individual glasses, pots, and other dishes.
- Load glasses into the correctly sized glass rack and position the glasses so that they are free draining. By positioning the glasses correctly, you can prevent unwanted marks or stains from forming on your glasses.
- Choose a gentle, phosphate free detergent to minimize spotting.
- Place the glass rack into the glass washer and shut the door.
- Set the glass washer to your washing preferences and start the cycle.
- Open the dishwasher briefly at the end of its cycle to let the steam pass. Avoid opening fully until the dishwasher has cooled.

Glassware Handling Tips

- Failure to review your product's care and handling may result in breakage of the product or personal injury. It is important to note the following tips for handling glassware.
- Avoid extreme temperature changes of glassware items. Transitioning from one temperature extreme to the next may cause stress to the glassware and risk breakage from thermal shock. To avoid this:
 - Do not put hot items in cold glassware; do not put cold items in hot glassware.
 - Do not pour hot tea, coffee, or other items into a cold glassware item or one that has just been rinsed; do not pour cold beverages into glass that is warm from rinsing or a dishwashing cycle.
 - Only expose your glassware item to higher or lower temperature when it is already at room temperature.
 - Do not scoop ice with the glassware; make sure to use a proper ice scoop.
- It's also important to handle your glassware items properly to prevent mechanical shock, which is a minute abrasion in the glass that causes weakness and makes it more susceptible to breakage from impact or thermal shock. To avoid this:
 - Do not stack glasses when storing (unless the glasses are considered "stackable")
 - Do not put flatware into glassware.
 - Do not strike flatware against glassware.
 - Do not carry multiple glasses unless by the stem; only if on a tray to minimize contact between glasses.
 - Do not hit glassware against hard objects.
 - Do not drop glassware.
- Do not pick up large glass items by the rim (especially home décor and bubble balls).
- Do lift and carry glass items by the bottoms or sides.
- Do handle glassware gently (remove abraded, cracked, or chipped glassware from use).

DINNERWARE

Here are the "Do's and Don'ts" when it comes to the care and handling of RAK Youngstown porcelain.

Washing "Do's"

- Do rack dishes immediately upon reaching the cleaning table.
- Do keep proper space on cleaning tables in dishwashing areas to allow loading and unloading of dishes.
- Do remove left-overs with a rubber scraper, gloved hands or water spray.
- Do ensure optimum water temperatures for pre-wash 110°- 140°F & wash at 150° - 160°. Load the dishwasher adequately in size appropriate slots. Ensure the rack holds the wares steady against water spray pressure.

Storage "Do's"

- Do allow dishes to dry and cool thoroughly before handling and stacking.
- Do place items carefully onto each other, never slide.
- Do always stack dishes of same sizes together – no higher than 12"
- Do ensure all racks and conveyors are plastic coated on contact surfaces.
- Do load items in appropriate dish racks without piece-to-piece contact.
- Do place cups and other hollowware in specifically designed racks.
- Do separate metal and glass from porcelain, sort like items in tote boxes or bus pans.

Porcelain "Don'ts"

- Do not allow dirty dishes to pile up
- Do not jam pack dishes together to ensure sufficient separation. Use metal trays and bus boxes
- Do not overload storage space and dishwasher unit
- Do not use metal utensils or other dinnerware to scrape
- Do not pre-soak dishes—this affects glazing
- Do not bang dishes against each other
- Do not stack hot or wet porcelain items—allow them to dry.
- Do not stack cups and mugs—always store in plastic racks.
- Do not drop items into self leveling dispensers.
- Do not store dishes in high traffic areas like corridors or doorways.
- Do not scour dishes with abrasive pads or cleansers.
- Do not serve with inadequate dinnerware inventory to prevent overworking.

FLATWARE

Here are some guidelines to follow for care and handling of RAK Youngstown Flatware.

Handling

- Minimum amount of handling is required when perforated cylinders in a portable racks are used to transport, wash, and dispense flatware.
- Sort flatware tines, bowls, and blades up when using a system where the flatware is transferred from a cleaning cylinder to a storage cylinder by inversion.

Washing

- Remove all remnants of food from metalware items immediately after use. Avoid using steel wool or metal scrapers.
- Always separate flatware for pre-soaking and use a plastic or stainless-steel pan, never aluminum.
- Pre-soak and wash metalware immediately after its removal from the table. Do not leave metalware in the pre-soak solution for more than 20 minutes before it is washed. Change the pre-soak solution after 2-3 cycles of use. Chemicals accumulate in pre-soak and may cause harm.
- Do not use a pre-soak solution containing acidic silver de-tarnishing agents, including chlorides, bromides, or iodides, as these products cause severe corrosion.
- Always wash your metalware in hot water, and make sure you choose a cleaning agent free of abrasive or corrosive qualities that might damage your metalware.
- Avoid low-temp dishwashing; it is not suited for metalware.

Rinsing

- Consider adding a wetting agent to the rinse to prevent minerals in the water from staining your metalware.
- Utilize a softener if you have very hard water. A high chloride content in the water can also be damaging.
